

Ideation Phase

Define the Problem Statements

Date	01 September 2026
Team ID	Individual Project
Project Name	Software Installation Request Automation in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - who are they?	Describe the customer and their attributes here
I'm trying to	List their outcome or "job" the care about - what are they trying to achieve?	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way - what frustrates them most?	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists - what needs to be solved?	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Describe the emotions the result from experiencing the problems or barriers

Example:

I am	I'm trying to	But	Because	Which makes me feel
a traveler	book flights on my phone	it takes a long time	The website is not responsive and doesn't have a mobile version	Frustrated

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Employee / Requester	request software installation through ServiceNow	software requests are often submitted manually and the approval and fulfillment process is not structured	there is no standardized request process with centralized tracking and automated routing	delayed access to required software and less visibility into request status
PS-2	IT Support / Fulfillment Team	process and fulfill software installation requests efficiently	the team has to manually coordinate approvals, assign installation work, and handle license-related issues	request information, task assignment, status tracking, and exception handling are not fully automated	more manual effort, delays, and difficulty tracking the complete request lifecycle
