

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	01 September 2026
Project Type	Individual Project
Project Name	Software Installation Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution — automating software installation requests in ServiceNow using Service Catalog and Workflows.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Service Catalog Item Creation	Create 'Software Installation Request' catalog item Add short description and detailed description Assign to Software category
FR-2	Catalog Form / Variables	Software Name (single line text) Version Required (single line text) License Justification (multi line text) Urgency – Normal/High/Critical (choice)
FR-3	Approval Workflow	Route request to Manager Approval group Approve/Reject decision drives next step Escalate to compliance/security team when required
FR-4	Task Automation / Fulfillment	Auto-generate Software Fulfillment Task on approval Assign task to IT Support / Software Support team Track task state: Open, Work in Progress, Completed
FR-5	Notifications	Notify requester, approver, and IT staff at each stage Notify on approval, rejection, and completion
FR-6	Exception Handling (Business Rule)	Auto-create Incident when request is put On Hold due to license shortage Assign incident to Software Support group
FR-7	Configuration Migration	Capture all customizations in an Update Set Export, retrieve, preview and commit Update Set across instances

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple, guided catalog form (Service Portal & platform UI) so end users can raise a request in under 2 minutes with minimal training.
NFR-2	Security	Role-based access to catalog item and approvals; approval routing restricted to Manager/Security groups; audit trail via Update Sets and workflow history.
NFR-3	Reliability	Workflow guarantees task creation only after approval is recorded; business rule reliably raises an incident on license shortage so no request is silently dropped.
NFR-4	Performance	Catalog item, variables, and workflow are lightweight (no heavy scripts on load) so the request form and 'Order Now' action respond without noticeable delay.
NFR-5	Availability	Built natively on the ServiceNow platform, inheriting platform uptime/HA; no external dependencies that could take the process offline.
NFR-6	Scalability	Catalog item, workflow, and business rule are reusable and configurable — the same pattern extends to additional software items or approval groups as demand grows.
