

# Problem-Solution Fit Canvas 2.0

Purpose / Vision: Automate and simplify software installation requests in ServiceNow

|                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>1. CUSTOMER SEGMENT(S)</b> <span>CS</span></p> <p>Who is your customer? Employees who need approved software installed on their work devices.</p>                                                                                                                                                                                                                 | <p><b>6. CUSTOMER CONSTRAINTS</b> <span>CC</span></p> <p>What constraints prevent the customer from taking action or limit their choices? Approval policies, software licensing, device compatibility, required request information, and IT support availability.</p>                                                                                                                                                       | <p><b>5. AVAILABLE SOLUTIONS</b> <span>AS</span></p> <p>Which solutions are available when the customer faces the problem? Email or verbal requests, manual IT tickets, direct contact with IT staff, spreadsheets or informal approvals. Familiar, but slow, inconsistent and difficult to track.</p> |
| <p><b>2. JOBS-TO-BE-DONE / PROBLEMS</b> <span>J&amp;P</span></p> <p>Which jobs-to-be-done or problems do you address? Submit a complete software request, obtain approval, get software installed, track progress, and resolve license-related blockers.</p>                                                                                                            | <p><b>9. PROBLEM ROOT CAUSE</b> <span>RC</span></p> <p>What is the real reason this problem exists? Software requests are often handled through disconnected manual communication without standardized intake, automated approval, task routing, or exception handling.</p>                                                                                                                                                 | <p><b>7. BEHAVIOUR</b> <span>BE</span></p> <p>What does your customer do to address the problem? The employee contacts IT, sends a request, waits for approval, follows up for status, and supplies additional details when needed.</p>                                                                |
| <p><b>3. TRIGGERS</b> <span>TR</span></p> <p>What triggers customers to act? Need for a business application, onboarding, new project assignment, replacement device, or urgent work requirement.</p> <p><b>4. EMOTIONS: BEFORE / AFTER</b> <span>EM</span></p> <p>Before: frustrated, uncertain, impatient. After automation: informed, confident, and in control.</p> | <p><b>10. YOUR SOLUTION</b> <span>SL</span></p> <p>Automated ServiceNow software installation request solution:</p> <p>Service Catalog item + structured variables + approval workflow/automation + catalog task assignment + notifications + SLA tracking + license-shortage incident creation + Update Set deployment.</p> <p>Purpose: provide a standardized, transparent and repeatable software request lifecycle.</p> | <p><b>8. CHANNELS OF BEHAVIOUR</b> <span>CH</span></p> <p><b>8.1 ONLINE</b></p> <p>ServiceNow Service Catalog, Service Portal, request status pages and notifications.</p> <p><b>8.2 OFFLINE</b></p> <p>Email, phone calls, verbal requests and direct IT follow-up.</p>                               |
